Getting Started with Dart

Now lets dive into the core concepts of Dart

1 Setting up Your Development Environment

To start coding in Dart youll need a development environment There are several options available but the most popular and recommended is DartPad DartPad An online code editor that allows you to write and execute Dart code directly in your browser Its a great starting point for experimenting with the language without any setup

2 The Basics of Dart Syntax

Dart uses a familiar syntax similar to other popular languages like Java and C Lets explore the core elements

Variables

Variables store data in a program In Dart you declare variables using the var keyword followed by the variable name and an assignment operator

```
dart var name Alice
var age 30
```

3 Data Types

Dart supports several data types including

- Numbers
 - Integers: int
 - Doubles: double
- Strings: Text enclosed in single or double quotes: Hello or World
- Booleans: True or false values: true false
- Lists: Ordered collections of elements: 1 2 3
- Maps: Keyvalue pairs: name Alice age 30

Operators

Operators are symbols used to perform operations on variables and data Common operators include

- Arithmetic operators
- Comparison operators
- Logical operators

3 Control Flow

Control flow statements dictate the execution order of code Here are some essential control flow structures

if statement

Executes a block of code only if a condition is true

```
dart if age > 18 printYou are an adult
else printYou are a minor
```

for loop

Repeats a block of code multiple times

```
dart for var i 0 i < 5 i printIteration i
```

while loop

Repeats a block of code as long as a condition is true

```
dart var count 0
while count < 5 printCount count
count++
```

4 ObjectOriented Programming OOP

Dart is an objectoriented language which means it uses objects to represent data and behavior

Key OOP concepts in Dart include

- Classes: Blueprints for creating objects

```
dart class Person {
  String name;
  int age;
  void sayHello();
  printHello();
}
```
