do human beings have a special and distinguished place in reality in idealism and

the harmony of thought and reality thomas hofweber contends that they do we are special since there is an intimate connection between our human minds and reality itself this book defends a form of idealism which holds that our human minds constrain but do not construct reality as the totality of facts reality as the totality of facts is thus not independent of our minds and our minds play a metaphysically special role in all of reality but reality as the totality of things is taken to be completely independent of us hofweber s proposed form of conceptual idealism is formulated via the notion of a harmony between our minds and reality this harmony is defended through considerations in the philosophy of language how can one possibly defend a metaphysical thesis like idealism from considerations about our own representation a key step in the book s argument is to consider a special class of concepts inescapable concepts which we cannot rationally replace with different ones this leads to a new approach for making progress in metaphysics immanent metaphysics which is broadly neo kantian in spirit

this work is a contribution to certain aspects of idealistic philosophy it is a comparative study yet it is not a comparison for the sake of comparison this book examines the supra rational absolutism of the west developed under the hegelian influence and in the light of the criticisms shows the peculiar character of the advaita vedanta of sankara it is therefore not a mere exposition but a criticism and construction the discussions are not cosmological but epistemological and metaphysical approached from the side of logic the work may also be viewed as a reorientation of sankara s system it places sankara s philosophy in line with the idealistic philosophies of the west so that we can understand the peculiarities of the former in terms of the latter it thus discovers or brings into clearer light the guiding principle of sankara s thought it brings out the full significance of the principles of non contradiction applied by sankara as a test of truth and reality and shows its difference from the same principle as understood by hegel and the hegelians the aim of this work is to attempt at laying the metaphysical foundation of the logic of supra rational absolutism the interpretation of advaita is based mostly on polemical works

imagining irreality looks at the various ways philosophers have considered the realm of unreal possibilities and nonexistent objects author nicholas rescher ties both diverse approaches and makes an argument against the philosophical trend of dealing with nonexistent possible worlds as though they were authentic objects he does not attempt to show that no platonic realm of possibilities can exist but merely that philosophers can discuss and think about unrealized possibilities without recourse to such a realm
