in an attempt to better account for the impressive diversity of positions and relations that characterizes the eighteenth century world this collection proposes a new methodological frame one that is less hierarchical in approach and more focused

instead on the nature of these interactions on their Addisonian usefulness declared goals and unintended results by shifting focus from a cultural historicist approach to sociability to the rhizomatic nature of eighteenth century associations this collection approaches them through new methodological lenses that include social network analysis assemblage and graph theory social media and digital humanities scholarship imagining the eighteenth century world as a networked community rather than a competing one reflects a recent interest in novel forms of social interaction facilitated by new social media from internet forums to various types of social networking sites and also signals the increasing involvement of academic communities in digital humanities projects that use new technologies to map out patterns of intellectual exchange as such the articles included in this collection demonstrate the benefits of applying interdisciplinary approaches to eighteenth century sociability and their role in shedding new light on the way public opinion was formed and ideas disseminated during pre modern times the issues addressed by our contributors are of paramount importance for understanding the eighteenth century culture of sociability they address among other things clubbing practices and social networking strategies political cultural gender based in the eighteenth century world the role of clubs and other associations in improving knowledge and behaviors conflicting views on publicity literary and political alliances and their importance for an emerging celebrity culture the role of cross national networks in launching pan european and transatlantic trends romantic modes of sociability as well as the contribution of voluntary associations clubs literary salons communities of readers etc to the formation of the public sphere this collection demonstrates how relevant social networking strategies were to the context of the eighteenth century world and how similar they are to the congeries of new practices shaping the digital public sphere of today

how big data and machine learning encode discrimination and create agitated clusters of comforting rage in discriminating data Wendy Hui Kyong Chun reveals how polarization is a goal not an error within big data and machine learning these methods she argues encode segregation eugenics and identity politics through their default assumptions and conditions correlation which grounds big data's predictive potential stems from twentieth century eugenic attempts to breed a better future recommender systems foster angry clusters of sameness through homophily users are trained to become authentically predictable via a politics and technology of recognition machine learning and data analytics thus seek to disrupt the future by making disruption impossible Chun who has a background in systems design engineering as well as media

studies and cultural theory explains that although machine learning algorithms may not officially include race as a category they embed whiteness as a default facial recognition technology for example relies on the faces of hollywood celebrities and university undergraduates groups not famous for their diversity homophily emerged as a concept to describe white u s resident attitudes to living in biracial yet segregated public housing predictive policing technology deploys models trained on studies of predominantly underserved neighborhoods trained on selected and often discriminatory or dirty data these algorithms are only validated if they mirror this data how can we release ourselves from the vice like grip of discriminatory data chun calls for alternative algorithms defaults and interdisciplinary coalitions in order to desegregate networks and foster a more democratic big data
